

6. JVCS-Check

JVCS-Check is an easy-to-use on-line tool which provides instant audio and video ^[1] quality assessment for IP Videoconferencing ^[2] endpoints.

A typical JVCS-Check assessment session takes just over 10 minutes to complete and consists of the following 10 chapters:

- Chapter 1: Countdown clock for 15 seconds allowing users to prepare for the assessment
- Chapter 2: Welcome Message
- Chapter 3: Introduction of Audio Level assessment and Un-muting of Microphones
- Chapter 4: Performing Audio Level Assessment
- Chapter 5: Background Noise Level Assessment
- Chapter 6: Receive Audio and Video Subjective Assessment
- Chapter 7: Transmit Video Subjective Assessment
- Chapter 8: Display Network Statistics from MCU
- Chapter 9: Display Network Statistics by Endpoint
- Chapter 10: Concluding Message

All chapters are introduced by a recorded presenter who provides a technical summary of each chapter.

Registering with JVCS-Check

Before using the JVCS-Check assessment tool, users not already registered with the JVCS Booking Service must first register by completing an on-line Registration Form ^[3].

How to Access JVCS-Check

Once logged in, users will be taken to the home page of that service where they can set up a video call between your endpoint and the JVCS-Check.

Login to JVCS Booking Service ^[3]

On-line document

An online User Guide provides users with a step-by-step guide to setup a video call between their endpoints and the JVCS-Check tool ^[4].

The Video Technology Advisory Service ^[5] (VTAS) provides unbiased advice on many aspects of videoconferencing, including product evaluation reports.
