Post Questions or Ideas

Each user can post an idea or a question to the community for it to help with or comment upon. These pieces of content are termed user content and are subject to the Terms and Conditions governing user generate content.

If a user is having an issue with a Janet product, service or networking issue, then you can post a *Question* [1]with as much detail as possible about what is or is not happening, any relevant code or logs.

The *Ideas* [2] section is a space for you to suggest ideas to the Janet community for discussion and possible development to the Janet roadmap.

URLs and email addresses will be made into links automatically.

You can enable syntax highlighting for code snippets by placing code snippets around the code. Currently C, C++, Java, Javascript, PHP, Python and Ruby are supported tags but you can also use code, blockcode and drupal tags to insert code.
