

Disaster recovery plans

All organisations should consider producing a network disaster recovery document as part of their overall site disaster recovery plans.

Points to consider include:

- identify staff responsible for each action required by the Recovery Plan
- keep machine rooms tidy to minimise fire risk
- maintain offsite secondary servers
- agree to exchange systems with other sites
- keep offsite copies of:
 - backups
 - the router configuration
 - critical mailing lists
 - configuration tables for vital services.

Further advice may be found at [UCISA](#) ^[1] and [ACU](#) ^[2] (Janet(UK) takes no responsibility for the content or accuracy of external web sites).
