

Walled garden for onboarding user devices to eduroam

This document is intended for the system administrators at member organisations and describes an implementation of a 'walled garden' network service that only gives access to setup tools to enable user devices to be correctly configured to run eduroam securely. The setup tools are the configuration installers produced using the eduroam CAT system, so administrators adopting this deployment will also need to learn how to use that. (See the associated document posted in this eduroam Group area - introduction to using the eduroam(UK) Support site together with an introduction to the eduroam Configuration Assistant Tool and a guide to getting started with the eduroam CAT site.)
