

Service Policies

JANET(UK) organisations with a primary connection are able to register to use Janet Videoconferencing. This involves registration of their videoconferencing endpoints (studios, desktop systems and all other endpoints) with the [Booking Service](#) ^[1]. Once registered, each organisation is required to successfully complete a quality assurance test. The test is carried out with the assistance of Janet Videoconferencing, and involves measuring the objective audio/video quality and network connectivity of an organisation's videoconferencing endpoint. These tests are repeated at six month intervals after initial registration.

Once an organisation is registered and using the [Booking Service](#) ^[1], they will be able to manage videoconferencing resources within their organisation and ensure no conflicts occur between room bookings.

Endpoints not registered with the [Booking Service](#) ^[1] may take part in videoconferences with registered organisations by being brought into the conference as a 'guest endpoint' by that organisation. Guest venues undertake a connectivity test rather than a quality assurance test, to ensure that the endpoint is able to connect to the videoconference.
