### E-Health Informatics Research Centres (E-HIRCs) Call

**This call is now closed for applications and is available for reference purposes only.**

It is vital that the UK research community is in a strong position to maximise the health research potential offered by linking electronic health records with other forms of routinely collected data and research datasets. The major funders of health research are working in partnership to ensure the UK builds critical mass and expertise in health informatics research. This call to establish centres of excellence in research using e-health records is part of a shared vision to promote linkage of electronic data for research.

# £19M

- Arthritis Research UK,
- British Heart Foundation
- Cancer Research UK
- Economic and Social Research Council
- Engineering and Physical Sciences Research Council
- National Institute of Health Research,
- National Institute for Social Care and Health Research (Welsh Assembly Government),
- Chief Scientist Office (Scottish Government Health Directorates)
- Wellcome Trust

# The Centres will:

- pursue cutting-edge research,
- deliver innovative linkage and analysis of health-related data sets,
- build research capacity and expertise and
- act as an interface with industry, practice and policy with the aim of building and sustaining a vibrant health informatics research capability in the UK.

# The next 15 minutes

- HERCS

- Benefits
  - Research
  - Health Service
  - Education
- Getting involved

# Background

- Office for the Strategic Co-Ordination of Health Research (OSCHR) e-health
- MRC mapping exercise
- Secure Anonymised Information Linkage (SAIL)
- Scottish Health Informatics Programme (SHIP+),
- Research Capability Programme (RCP) etc.
- Wellcome/ESRC/MRC Frontiers Meeting

**ACRONYM Alert**

# Purpose of the call

- Fund a small number of health informatics research centres
  - To conduct excellent research
  - Develop innovative methods/linkages
  - Build capacity
  - Interface with
    - industry,
    - practitioners and
    - policy-makers

# Essential criteria

- **Scientific excellence** based on existing strengths and innovative proposals for health-health or cross-sectoral linkage
- **Training and career development** for researchers **and** programmers, data managers, etc.
- **Clear governance structure** under a director based in the lead institution
- **Networking** with other e-HIRCs and the wider research community [*bidders can seek an extra £1 million to become the nominated lead centre*]
- **Public engagement** to promote public/professional understanding of e-health records research

# Desirable criteria

- Modular training (e.g. short courses)
- Ethics and governance
- Linkage of health (incl. imaging and 'omics) and non-health (incl. socio-economic and geo-spatial) data
- Focus on translation (public, policy, NHS, industry)
- Sharing of data for secondary analysis

Our work will focus initially on using data from health records to make improvements in: **Cardiovascular medicine, Maternal and child health, Infection**

We will establish a **new informatics platform** to ensure that data collected in different clinical systems can be securely and meaningfully integrated in research.

We aim to make **improvements in the quality of data collected** and develop tools to help clinicians in decision-making.

We will also build on existing training strengths to establish a **new doctoral training programme, taught courses and leadership development programmes, alongside innovative public engagement programmes.**

Co-prescription of Warfarin and NSAIDs

Implement evidence by drilling down to patient level

# The paradox

aims to solve

1. Researchers cannot easily identify potentially eligible and willing participants.
2. Potentially eligible and willing participants never hear about studies in which they might be interested and wish to take part;

# 19. Use information effectively in a medical context.

- (a) Keep accurate, legible and complete clinical records.
- (b) Make effective use of computers and other information systems, including storing and retrieving information.
- (c) Keep to the requirements of confidentiality and data protection legislation and codes of practice in all dealings with information.
- (d) Access information sources and use the information in relation to patient care, health promotion, advice and information to patients, and research and education.
- (e) Apply the principles, method and knowledge of health informatics to medical practice.

# Getting Involved

- **Networking** with other e-HIRCs and the wider research community
  - Scotland, Wales, North, South
- **Training and career development** for researchers **and** programmers, data managers, etc.
  - Undergraduate opportunities
- **Scientific excellence** based on existing strengths and innovative proposals for health-health or cross-sectoral linkage
- **Public engagement** to promote public/professional understanding of e-health records research
